Identify the optimal embryos for transfer

Embrace is a new genetic test that prioritizes embryos for transfer by identifying potential chromosome abnormalities without the need for a biopsy. Evidence shows that embryos with the correct number of chromosomes have a significantly higher chance of leading to a successful pregnancy.

How it works

Your embryo develops in a drop of liquid called **culture medium**. As it grows, the embryo **releases DNA** into the culture medium. Highly trained embryologists collect this liquid and send it to us for testing.

We analyze this liquid at Igenomix and provide you and your physician with a report indicating which **embryos are most likely to be chromosomally normal** and therefore optimal for transfer.

A safe and effective alternative to traditional PGT-A

Analysis of embryonic cell-free DNA could provide objective and helpful information in prioritising the best embryo for transfer, potentially improving IVF outcomes.¹

Clinical pregnancy rate with Embrace (Euploid SETs)

Compare to ESHRE European ART data: **~33–36% clinical pregnancy per embryo transfer** (fresh IVF/ICSI and FET)²

Superior Patient Support

Genetic Counselling Services Provided by Igenomix:

- **Pre- and post-test counselling**
- **Family history evaluation**
- **Inheritance patterns and genetic risk education**
- **Emotional and psychological support around genetic results**
- **Risk assessment**
- **Explanation of available tests**
